FLEET ONE GLOBAL

THE CHOICE FOR BASIC SATELLITE VOICE AND DATA

Satellite connectivity is now accessible and affordable for all vessels – available wherever and whenever you need it.

Inmarsat has introduced Fleet One Global to bring satellite connectivity within the reach of any vessel.

Traditionally, satellite communications have not been considered a cost-effective option for commercial vessels with low data usage requirements. Owners have not wanted to be tied in to subscription costs for a service they might only need seasonally or for occasional voyages, and only when they sail out of VHF or GSM coverage.

FLEXIBLE, RELIABLE, AFFORDABLE

Fleet One Global changes all that. It is simple and cost-effective, giving you 100kbps connectivity at one global rate, either prepaid or postpaid. It's flexible, allowing you to de-activate and re-activate the service at any time, so you only pay for it when you need it.

Hardware costs have also been kept low to help you manage budget, and the equipment is easy to install, needing no expert know-how.

STAY CONNECTED, STAY SAFE

Always-on connectivity gives you access to email and critical applications such as real-time electronic charts and weather reporting, wherever you are. Fishing and merchant vessels can transmit regulatory declarations, and save time and money by calling ahead to sell their catch or book in repairs before they get to port.

For seafarers seeking the adventure of longer voyages,

Fleet One Global delivers the reassurance of a reliable, simultaneous voice and data connection for business, support services, and staying in touch with family and friends back home – anywhere on the world's oceans. In an emergency, Fleet One supports Inmarsat's free '505' safety service, which directs a call straight through to a Maritime Rescue Co-ordination Centre (MRCC). So you can set sail knowing you are in safe hands.

HOW TO BUY

Fleet One Global is available from Inmarsat and our partners around the

world. Visit our website to find the right choice for you.
