

# Empowering you to manage your fleet wi-fi networks from anywhere

with Wireless Access Points

# Wireless Access Points

## CISCO Meraki

Wireless access points installed on vessels provide convenient internet access to business and crew Wi-Fi devices. However, after installation, these access points often become inaccessible from the shore, requiring on-board staff to manage them. Consequently, the rollout of upgrades, configurations, and access rules is managed locally, one by one, across the entire fleet.

Inmarsat has partnered with CISCO Meraki to offer you a comprehensive and user-friendly approach to deploying, managing, and monitoring your Wi-Fi installations across your fleet.

### Centralised management:

With a cloud-based dashboard, you can easily manage and monitor all your wireless access points from a single, centralised location, eliminating the need for on-board staff to manage them individually.

### Remote configuration and upgrades:

Remotely configure and upgrade all your access points, saving time and resources. This helps ensure that your entire fleet is always up-to-date with the latest security and performance features.

### Customised access rules:

Set customised access rules for each access point, ensuring that your business and crew devices have the appropriate levels of access. This helps to prevent unauthorised access and maintain network security.

### Easy deployment

User-friendly design makes it easy to deploy and manage your wireless access points.

### Cost-effective

With our low monthly fee, the wireless access points offers a cost-effective alternative to managing your wireless network.

### Reliable connectivity

Wireless access points use our global satellite network to provide reliable and uninterrupted connectivity to your fleet. This helps ensure that your business and crew can stay connected and productive, even in remote locations.

### How to buy

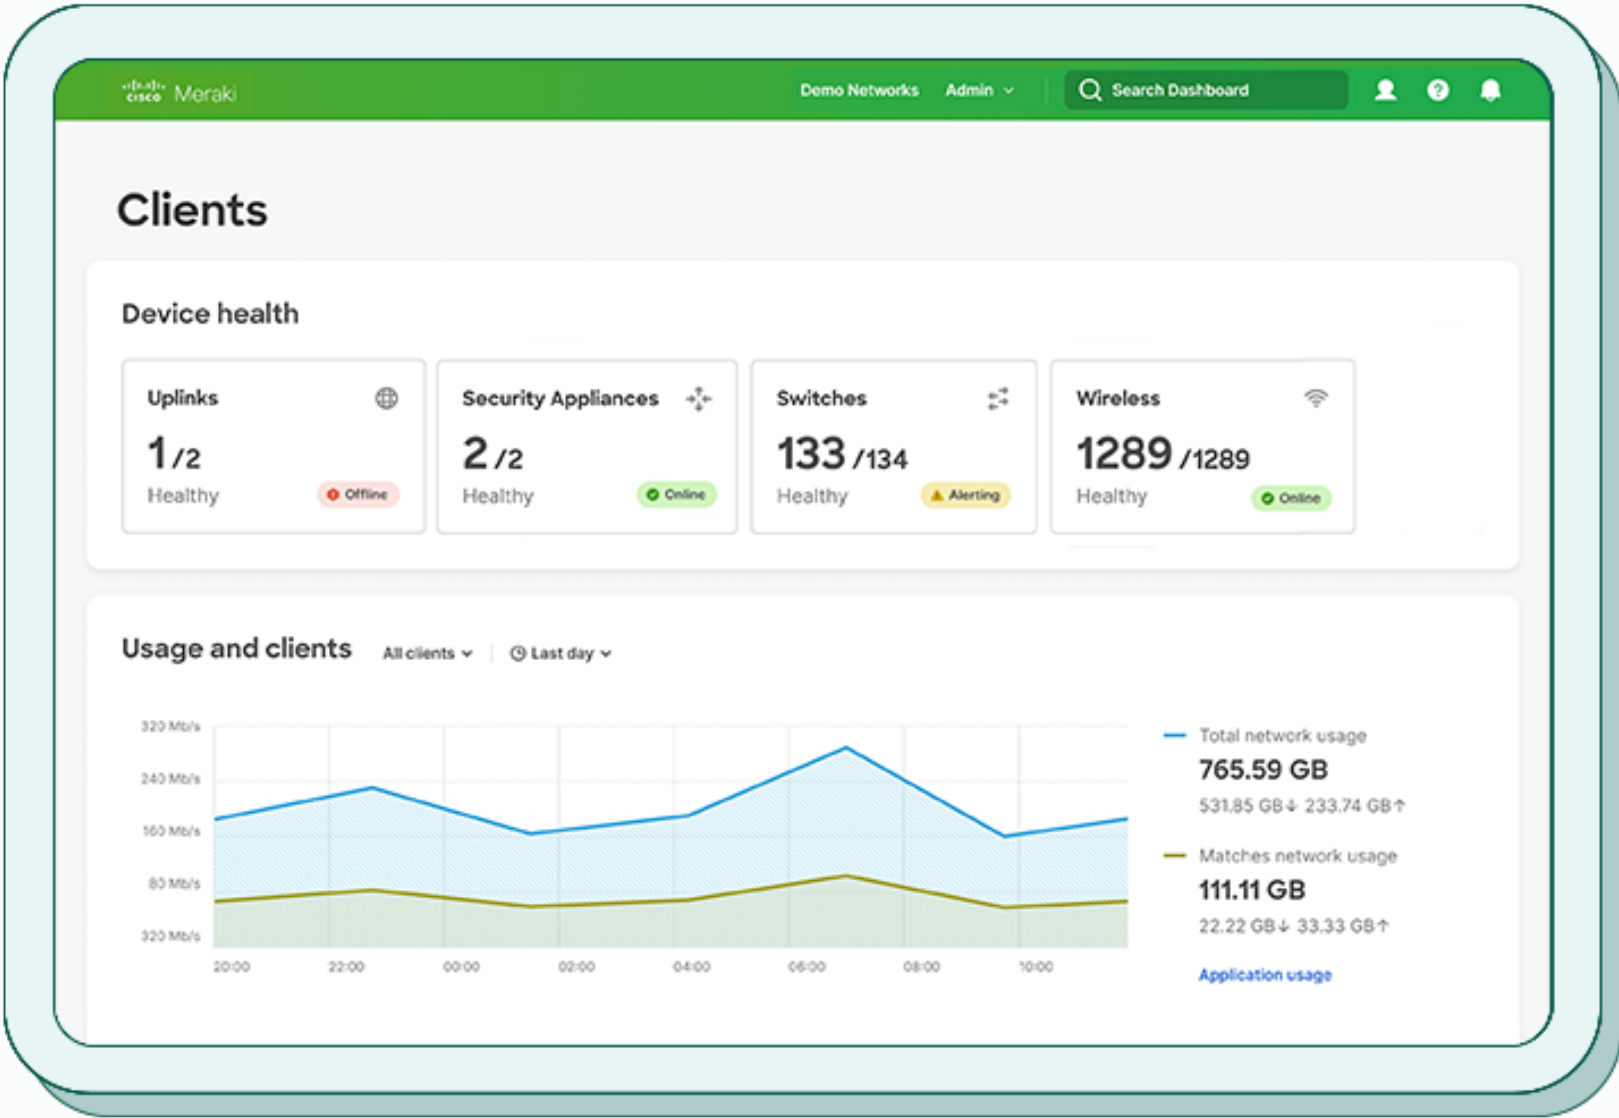

Contact Inmarsat today to learn more about Wireless Access Points and how it can benefit your fleet.

### Meraki Dashboard

### Special features

Inmarsat-powered, CISCO Meraki Wireless Access Points (APs) offer a comprehensive and user-friendly approach to managing your wireless network on board your vessels. With a cloud-based dashboard, remote configuration and upgrades, customised access rules, and global coverage, you can easily and efficiently manage your network from a centralised location. This results in cost savings, improved network security, and a reliable and seamless Wi-Fi experience for your business and crew.
