- **>** Internet connections required.
- **> Billing:** Simple monthly statements showing calls by Access Code.

Benefits

- **> Pay for what you use:** Costs based on usage.
- **> Ready to Use:** No extra hardware, software, or Internet connections required.
- **> Ready to Use:** No extra hardware, software, or Internet connections required.
- **> Control costs:** Only one monthly statement helps with cost accountability.

Inmarsat MobileLink is a convenient fixed-to-mobile voice service that can help you control your satellite communication costs. All calls appear on one monthly statement, streamlining your accounting and simplifying tracking of your accounts. Using MobileLink cost allocation can be split easily per company department or per vessel, depending on your requirements.

MobileLink supports all satellite phone services offered by Inmarsat operating in any marine, aeronautical, or remote land-based environment. MobileLink offers great savings over the normally higher tariffs of local telephone operators, when calling a satellite phone. It also provides an ideal voice solution in countries where the local telephone operator cannot access the Inmarsat satellite network.

There are four different Inmarsat MobileLink plans:

MobileLink Easy

MobileLink Easy is best suited for those who dial a single satellite phone or group of phones on a regular basis. With MobileLink Easy, a specific fixed number is assigned to each voice or fax number that you regularly call, so that you do not have to enter the satellite phone number – the call is connected automatically when you enter the fixed number that has been linked to that specific satellite phone number. You can request for a North American or European fixed number.

MobileLink Secure

MobileLink Secure is similar to MobileLink Easy, but adds a protection against undesired usage of the service. With MobileLink Secure, a specific Access Code is assigned to each voice or fax number that you regularly call. After dialing a generic fixed number, you will be prompted to enter your Access Code, so that you do not have to enter the satellite phone number – the call is connected automatically when you enter the Access Code that has been linked to that specific satellite phone number.

MobileLink Flex

MobileLink Flex allows you to dial any satellite phone number. It also supports speed dialing and the use of a personal PIN Code. After dialing a generic fixed number, you will be prompted to enter your Access Code. Next step is to enter the satellite phone number you want to dial. Via a voice prompted menu you can make use of a speed dial number. The list of numbers can be managed by the customer.

Inmarsat MobileLink™
Fixed-to-Mobile Service for Voice and Fax Communications

MobileLink One

MobileLink One provides users with a customized voice prompt menu that allows them to reach different extensions on one terminal. After dialing a North American or Dutch fixed number you are connected to the voice prompt menu of a vessel or an aircraft. The voice prompt menus are set according to individual customer requirements.

For security, MobileLink One also supports Calling Line Identification and the use of a personal PIN Code.

Contact your Inmarsat Account Manager and request the application form.

MobileLink Flex Features

> **Toll-free Access:** From the UK, North America, Argentina, Uruguay, Hong Kong, and selected cities in Russia.

> **PIN Security:** Optionally a subscriber can receive a 4-digit PIN Code, changeable by the user.

> **Speed Dial:** Capacity to store up to 90 entries exclusive to the assigned account number.

MobileLink One Features

> **Voice prompt menu:** all options configurable (vessel/aircraft name, menu choices).

> **PIN Security:** Optionally a subscriber can receive a 4-digit PIN Code, changeable by the user.

> **Calling Line identification:** Optionally a subscriber can register phone numbers that are allowed to dial the MobileLink One number. Other phone numbers will be refused a connection.
