

Key benefits

- 1** Send and receive SMS between smartphones and satellite phones such as Inmarsat's IsatPhone 2 for free
- 2** Available to download for free from Google Play and Apple App Store
- 3** Simple and easy to use interface

Satway

Designed for smartphone users, this app forms a vital part of your communications toolkit. Satway enables app users to send fast and reliable SMS to your satellite phone.

While you are out in the field with your satellite phone such as Inmarsat's IsatPhone 2 or IsatPhone Pro, people often need to send you information. With Satway, colleagues, family or friends can use the app on their smartphones to send free SMS messages to your satellite phone using Inmarsat's robust and reliable network.

Satway is the first mobile platform that enables smartphone users to send free SMS messages to satellite phones in remote locations via the networks of satellite service providers such as Inmarsat. The Satway app is available for Android, iPhone, iPad and iPod Touch and the SMS it sends can be received by Inmarsat's satellite phones anywhere in the world.

Advantages

Confirmation that an SMS was sent is a key feature of Satway, which offers peace of mind to the sender. Satway can be an even better option for SMS than conventional cellular networks because it does not depend on GSM networks. Satway also stores the memory of the last number dialled making it easy to continue conversations.

Usage scenarios

Anyone with a smartphone who wants to send SMS to someone that is using a traditional satellite phone such as Inmarsat's IsatPhone 2, could benefit from using the Satway app. Remote medical teams, security teams and IT managers could all find Satway a useful addition to their suite of smartphone applications.

Smart devices are now common place for business as well as personal use. However, there has been little point in workers packing their own smartphone or tablet if they cannot rely on getting a connection. Now teams can confidently include smart devices as part of their communications toolkit, thanks to Inmarsat's satellite connectivity. Field teams can use their own devices with our global satellite networks to talk, text, use apps and the internet, no matter where they are deployed. That makes Satway a useful part of the 'bring your own device' toolkit across a range of industries.

Inmarsat coverage

Satway is supported by Inmarsat's global L-band satellite network coverage, ensuring reliable access to critical data from remote sites anywhere in the world. Satway has been certified for use over the following services:

- > BGAN
- > IsatHub
- > IsatPhone 2 (receiver only)
- > IsatPhone Pro (receiver only)

Certified application

As part of our CAP (Certified Applications Provider) programme, Inmarsat works with a number of application providers with the intention of ensuring to that their applications are not only compatible with our network, but provide our network users with effective, customer-focused applications that offer genuine business benefits, whether they're using the network for voice, broadband, machine to machine connectivity, or all three. Only individual applications approved by Inmarsat are endorsed with the Inmarsat Certified logo.

Disclaimer

Where an application provider's application carries the Inmarsat Certified logo, it means that the application has been certified by Inmarsat to operate over Inmarsat's satellite network. Certification does not mean that Inmarsat is certifying any system design or assumes any liability or responsibility in connection with the application provider's application.

About Satway

The Satway App was developed by Verasat® Satellite Communications which specialises in providing satellite services to business and leisure users, along with professionals working in other sectors such as: humanitarian assistance/disaster relief, maritime and air transport. Verasat® Satellite Communications is headquartered in Barcelona, Spain.
